KTSU Rubber Tracks for compact track loaders (CTL), mini-excavators and carrier dumpers are engineered to enhance performance on the job.

State-of-the-Art production capabilities, a managed endeavor for excellence and attention to detail - assures proper fit, longevity, competitive prices and outstanding customer satisfaction. These factors are making KTSU Rubber Tracks a leader in the markets we participate.

The internal track makeup features an annular design of joint-less steel cords reducing and equalizing stress which provides stronger tensile strength throughout the track.

A selective blend of natural and synthetic rubber compounds, with a structural design specific to the machine application helps to prevent tread delamination, ruptures and provides maximum traction and floatation.

Benefits as stated place KTSU Rubber Tracks in a position to compete globally, regionally and locally giving you a solid quality choice.

KTSU America offers a world class NMC (Non-Metal Core) track for your ASV, CAT & TEREX multi-terrain loaders. Our track is designed for optimal field performance while minimizing structural wear. KTSU NMC tracks significantly improve operator performance and minimize machine down time.

- Superior Traction and Flotation
- Molded/dense drive lugs diminish breakage and slippage
- Anti-vibration tread reduces operator fatigue & extends service life
